

The packaging of the electric sachet of dilute liquids behind the stitching model XB

Sachet Liquid Packaging Machine Series XB

XB series sachet liquid packaging machines are designed for filling and packaging various thin liquids in the weight range of 1 to 1000 milligrams. These machines have the following features:

Space-saving design: These machines are designed to occupy minimal space and are easy to operate.

Optimal speed: These machines can package at a speed of between 100 and 200 sachets per minute.

Easy operation: These machines have an intelligent control panel that performs all packaging steps automatically.

Low-cost and quick maintenance: These machines are made of standard and accessible spare parts, which makes their maintenance quick and affordable in case of any problems.

Remarkable precision: These machines can control the filling level of sachets with an accuracy of over 99%.

Reasonable price: These machines are available at a reasonable price.

These machines have a back seal type and are suitable for packaging thin liquids. They have an electric system and a single filling nozzle. The unit of measurement of these machines is millimeter.

These machines can be used for packaging various thin liquids such as water, syrup, diluted chemicals, fully diluted fruit juices, etc. They are suitable for various industries such as the food industry, pharmaceutical industry, chemical industry, etc.

One of the key features of these machines is their space-saving design. They are designed to occupy minimal space and are easy to operate, making them ideal for use in small and space-constrained environments.

Packaging speed is a critical factor to consider when choosing a packaging machine. These machines can package at a speed of between 100 and 200 sachets per minute. This optimal speed increases production and saves time and money.

Packaging machines should be easy to operate for convenient use. These machines have an intelligent control panel that performs all packaging steps automatically, making them easy to use and requiring no specific technical knowledge.

The maintenance of packaging machines should be quick and affordable to ensure rapid repair in case of any problems. These machines are made of standard and accessible spare parts, which makes their maintenance quick and affordable.

Packaging accuracy is a critical factor to consider when choosing a packaging machine. These machines can control the filling level of sachets with an accuracy of over 99%. This prevents material waste and maintains product quality.

The price of packaging machines should be reasonable to make them accessible to everyone. These machines are available at a reasonable price.

Overall, the XB series sachet liquid packaging machines are unique devices that can meet the packaging needs of various industries for thin liquids.
