Peanut and Hazelnut Shelling Machine: The Best Way for Minimum Waste and Maximum Efficiency

The friction peanut shelling machine is a professional tool for shelling peanuts with minimum waste, allowing you to offer the best quality and acceptable product to the market. By using this portable machine, you can easily increase your profit.

The new vacuum and air system in the peanut whitening process uses vacuum and air as the peeling force, replacing the old sandpaper peeling machine. The new vacuum machine includes a hopper, elevator, receiving bucket, automatic weighing machine, peeling machine, red skin suction machine, vibration discharge sieve, dust collector and air compressor. This set and equipment is divided into five parts: feeding system, peeling system, red skin collection system, discharge system and PLC control system and or analog and mini PLC.

Some features of the peanut vacuum whitening machine include:

- High speed in peeling
- No effect on the quality of peanuts after whitening
- Long shelf life of peanut kernels
- Proper design based on food safety and hygiene standards
- Durable parts and minimal need for maintenance
- Easy to use

The new peanut and hazelnut whitening air and vacuum machine is a technological innovation in the peanut and hazelnut processing industry, operating up to 700 kg per hour with a reduction of about 2.5% in production capacity.

Peanut peeling machine

model NJ 101

Unique features of this peanut peeling machine include a skin collection system and its guidance into the bag. With this feature, you not only provide sufficient safety for the workforce during use, but also during peeling. Also, due to the presence of this collection system, peanut and walnut peeling can be done easily and without further manipulation.

By using the peanut and walnut peeling machine, as a peanut peeling machine manufacturer, it is a professional solution for peeling peanuts. This machine peels the skin with minimal waste of peanuts and walnuts, and allows you to supply peanuts and walnuts to domestic and foreign markets with minimal waste.

This peanut and walnut peeling machine, through its skin collection system and its guidance into the bag, provides sufficient safety for the workforce during use, in addition to ease of use, while reducing peeling costs and time. Also, devices with high capacity in small and industrial sizes have also been used. This feature helps producers to peel the most in less time and at low cost.

The price of this machine is very affordable compared to its performance and quality. By purchasing this machine from the iFoods website, you can benefit from its affordable price and its excellent advantages. By using this machine, you can reduce costs and maximize your productivity.

If you want to get peanut and walnut skin with the best peeling efficiency and with the least waste, the best option is the peanut peeling machine. Act now and purchase this professional product from the iFoods website at a reasonable price. We are waiting for your purchase.
